human activities in the form of production and consumption have increased to an all time high in many cases this increase has resulted in environmental problems such as waste and pollution that in turn affect our health and way of living societies have proposed different measures to address such environmental problems these range from different waste treatment technologies to alternative business models policy measures and lifecycle thinking in the design of products to mention but a few in this research the focus is on supporting early design activities of what is often called the conceptual design stage with the objective to provide effective and resource efficient offerings the early design activities considered here

are planning analysis and evaluation design researchers have largely supported these three activities with a variety of methods and tools however previous research has shown that design support coming from academia has had a low uptake in industry in this regard the aim of this research is to propose not only useful but also usable support for design practitioners during the conceptual design stage this research is carried out in the manufacturing sector in sweden where selected companies expressed an interest in collaborating with academia to address more thoroughly effective and resource efficient offerings to better match company needs and research from academia this research took a pragmatic and cross disciplinary approach this research approach along with literature reviews semi structured interviews workshops and questionnaires shows different ways in which support can be made more useful and usable the main gap addressed here is that the knowledge and the related skills of the user of the support have not been sufficiently explored the results include requirements of the user of the support proposed methods and tools derived from the requirements identified and most importantly the knowledge and skills needed by the user of the support the main message of this research is that support could be expanded from methods and tools to include knowledge and skills needed by design practitioners the users of support the flow of support from academia to industry could also be reinforced in a two way flow through a pragmatic and cross disciplinary approach to first and foremost address design practitioners needs mänskliga aktiviteter i form av produktion och konsumtion har aldrig varit högre denna ökning över tid har i många fall lett till miljöproblem som avfall och föroreningar vilka i sin tur påverkar vår hälsa och levnadssätt för att möta dessa miljöproblem har olika åtgärder föreslagits som tekniker för avfallshantering alternativa affärsmödeller policy och livscykeldesign för att nämna några fokus i forskningen som presenteras i denna avhandling är på tidiga designaktiviteter vilka ofta kallas det konceptuella designstadiet och som syftar till att ta fram resurseffektiva erbjudanden detta steg behandlas här genom att närmare undersöka designaktiviteterna planering analys och utvärdering designforskare har till stor del stöttat dessa tre aktiviteter med en mängd olika metoder och verktyg emellertid visar tidigare forskning att designstöd från akademien har ett lågt upptag i industrin syftet med denna forskning är därför att föreslå ett användbart stöd som också är användarvänlig för utövare under det konceptuella designstadiet för att uppnå detta genomförs forskningen inom tillverkningssektorn i sverige där deltagande företag uttryckt ett intresse av att samarbeta med akademien avseende resurseffektiva erbjudanden för att bättre matcha företagens behov med forskning från akademien antas en pragmatisk och tvärvetenskaplig strategi denna strategi tillsammans med litteraturöversikter semistrukturerade intervjuer workshops och enkäter visar hur stödet i det konceptuella designstadiet kan bli mer användbart och användarvänlig den huvudsakliga forskningsluckan som tas upp här är att kunskap och relaterade färdigheter hos användaren av stödet inte har undersökts tillräckligt resultatet ger en beskrivning av kraven på de stöd som användaren behöver föreslag på metoder och verktyg som baseras på de identifierade kraven och viktigast av allt den kunskap och de färdigheter som användaren av stödet behöver ha huvudbudskapet är att stöd kan utvidgas från att omfatta metoder och verktyg till att även inkludera behovet av kunskap och färdigheter hos designutövare det vill säga användarna av supporten stödet från den akademiska världen till industrin kan också förstärkas genom att bli ett tvåvägsflöde som med en pragmatisk och tvärvetenskaplig strategi först och främst adresserar användarens behov

design is a fundamental creative human activity this certainly applies to the design of artefacts the realisation of which has to meet many constraints and ever raising criteria the world in which we live today is enormously influenced by the human race over the last century these artefacts have dramatically changed the living conditions of humans the present wealth

in very large parts of the world depends on it all the ideas for better and new artefacts brought forward by humans have gone through the minds of designers who have turned them into feasible concepts and subsequently transformed them into realistic product models the designers have been still are and will remain the leading change agents in the physical world manufacturability of artefacts has always played a significant role in design in pre industrial manufacturing the blacksmith held the many design and realisation aspects of a product in one hand the synthesis of the design and manufacturing aspects took almost implicitly place in the head of the man all the knowledge and the skills were stored in one person education and training took place along the line of many years of apprenticeship when the production volumes increased assembling to measure was no longer tolerated and production efficiency became essential design process planning production planning and fabrication became separated concerns the designers created their own world separated from the production world they argued that restrictions in the freedom of designing would badly influence their creativity in design

bachelor thesis from the year 2019 in the subject business economics review of business studies grade 1 3 technical university of munich tum school of management chair for management accounting language english abstract the bachelor thesis combines theories literature lab and field experiments event studies from the industry and its very own empirical research to argue from both a strategic as well as a financial perspective that an inimitable organizational culture of intrinsic motivation and meaningful work may constitute a source of competitive advantage within the war for talent the thesis strives at highlighting the importance for firms to adapt to the newly emerged competitive environment that the ongoing war for talent has created by considering their people as their most valuable asset for the success of the organization as already hinted at throughout the art of war by sun tzu in 500 bc hence the reference in the title of this thesis after a brief review of the circumstances that led to the emergence of the war for talent and first implications for the industry it is argued from a strategic perspective why motivated talent depicts the key resource for competitive advantage and why conventional extrinsic incentive measures aimed at maximizing productivity are no longer effective afterwards a proposition will be made of how capitalizing on intrinsic motivation human's inner drive to accomplish inherently interesting and challenging tasks fostered through a framework of meaningful work might be the decisive driver to get ahead in the quest for talent a second string of argumentation draws a connection between meaningful work and superior financial performance this proposition is then tested by an empirical analysis comparing the financial performance of publicly traded companies featured on the 2017 fortune 100 best companies to work for list against a control portfolio and the broad market confirming significant differences for cumulative stock returns
